Introduction

In the current era of digital transformation, design is not limited to physical products but extends to the significant realm of **designing digital software products and applications**, such as Google Maps or an online training website. Understanding this concept is crucial for achieving more **effective communication** with our customers, adding the maximum possible value to the offering.

Startups particularly focus on creating digital products and services, emphasizing **innovation and the exploration of new opportunities** to provide fresh solutions to both old and new problems. While this field is also accessible to small and medium-sized enterprises (**SMEs**), the principles applied in designing products and services, with a user or customer-centric approach, are applicable across any type of business.

What is the design of digital products and services?

The design of digital products and services is a **strategic approach to creating an intuitive product** that provides a necessary solution to a **specific problem**, is easy to use, and is desired by a potential customer.

Digital product

- Its existence and form are digital.
- Access is through the internet.
- They often operate as a subscription.

Digital service

- Vision of everything that the digital product can encompass.
- Takes into account both customer and entire company experience.

Main tasks

Identify
opportunities

Create new ideas

Conduct market
research

User experience

Supervise final
tests

Maintain the
evolution

Benefits of digital products and services

Convenience

**Saving time
and money**

Customizable

Ecological

Objectives and principles of product and service design

1980s

User-centered
design

1990s

Inclusive design
"for all"

Today

Planet-centered
design

Design principles

Define the
problem

Simplify

Promote
conversion

Coherence,
consistency

User
orientation

Minimize
information inputs

Direct
communication

Minimize
cognitive load

Clear visual
design

Present
solutions

Maintain metrics to
improve

Errores

Not responding
to a need

Very wide
focus

Speed >
quality

Inconsistencies

Obsolete
interface

Design Thinking and the required steps for quality design

Steps:

1. Empathize
2. Define the problems
3. Devise
4. Prototype
5. Test

Points to consider:

Budget

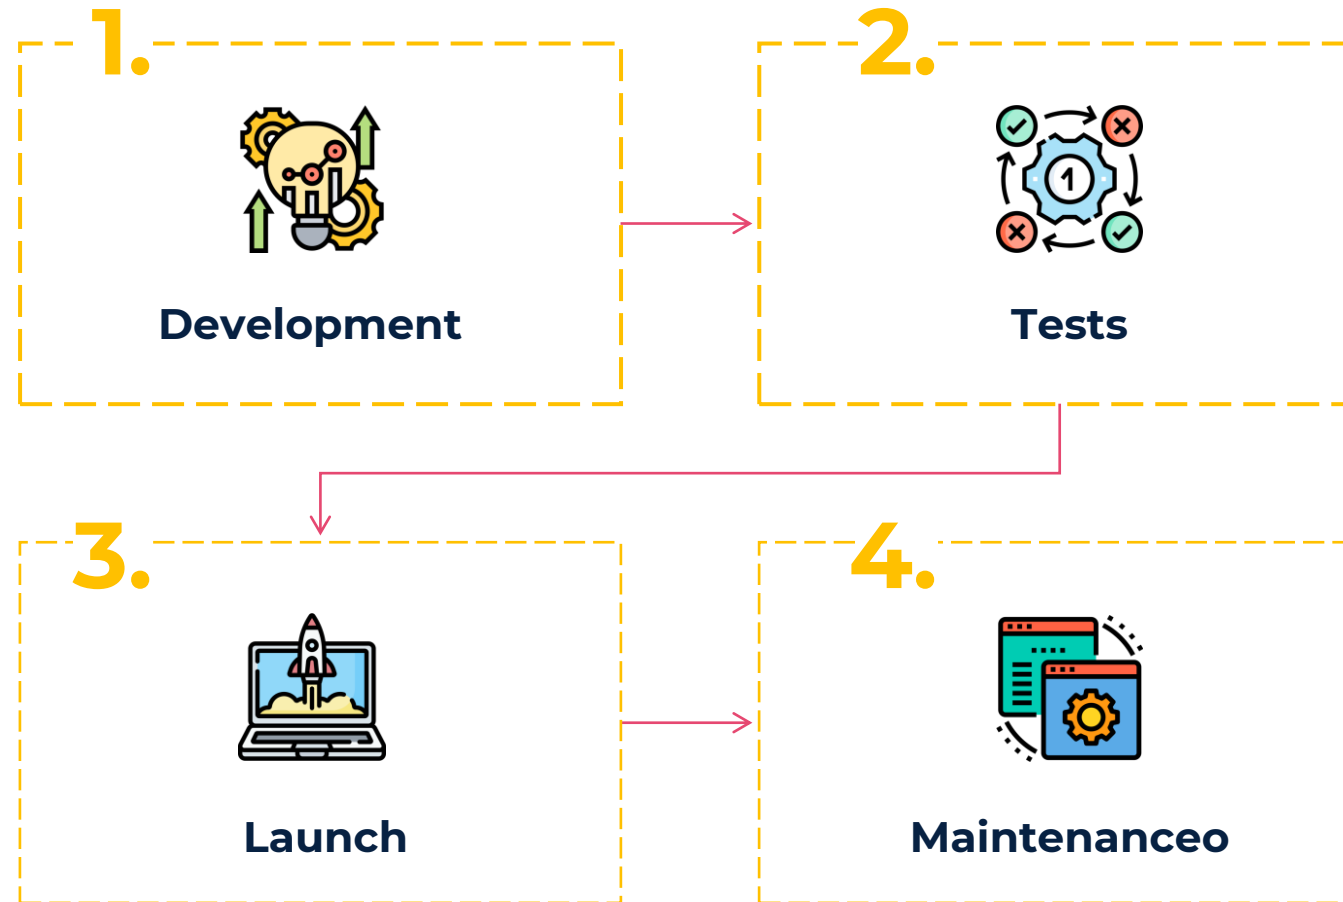

**Planning and
delivery dates**

**Marketing and
promotion**

Steps in the production or development of digital products

Conclusions

To create a **digital product or service** that aims to be used, solve a problem, and address a need by adding value, it is essential to have **good design**. Furthermore, this design must take into account all the components that encompass the organization.

A vision that can assist small and medium-sized enterprises (SMEs) in achieving effective design is **Design Thinking**. Putting oneself in the shoes of the end user and fostering empathy will enable the development of creativity to achieve the most accurate solution.
